

Get your can, eat the mints, and grab some magnets. The top portion will be used to magnet paper bills to the top, whereas the bottom will be reserved for the LED light, change, cards, and whatever other wallet stuffs you feel like putting in.

Simply get a magnet or two and put them on your folded bills. The magnets stick to the metal can and the money looks really cool as if it's hanging there.

Next step: Coin Slot

Now, we're going to make a coin slot so as to put change more easily into the Altoids can without opening the lid every time (because we all know how time consuming that is). Take your can, measure out the appropriate size (I used the length of a quarter), and cut away!

I used a Dremel to do this. Use caution!!! Flying metal may occur, though it is a straight cut. You can use some other means to make this slit, but I find it's easiest just to Dremel it.

After this, I took a piece of cardboard paper and cut it a bit bigger than the cut and wider. I put this on the inside and magneted it to the can. That way, money goes in, and doesn't come out.

You're almost there. To reduce the noise of the coins, I cut up some felt pads and attached them to the sides of the can. This simple action drastically reduced the noise given off by the coins.
